Abstract

This project is a web based shopping system for an existing shop. The project objective is to deliver the online shopping from the nearby shop. This project is an attempt to provide the advantages of online shopping to customers of a real shop. It helps buying the products in the nearby shop through internet . Thus the customer will get the service of online shopping and home delivery from their favourite shop on the same day of shopping. This system can be implemented to any shop in the locality or to multinational branded shops having retail outlet chains nearby . If shops are providing an online portal where their customers can enjoy easy shopping from nearby shop. Since the application is available in the Smartphone it is easily accessible and always available.

Existing System

In existing system we can get every items online but we can't get it delivered on the same day. Sometimes we may get damaged items and will not be able to return the item.

Proposed System

In proposed system we can get the items delivered on the same day and as its from the nearby shop . We can buy the items from our favourite shops. They are trustworthy .

Modules

- 1) Admin
- 2) User
- 3) Vendors
- 4) Delivery Boy

Admin

Admin has overall control over the system. Admin is the one who verified the users, vendors and delivery boys. Admin can enable and disable all the three if there is any issues. Admins verifies them via email. Notifies the delivery boys about the available deliveries.

User

User creates account by giving the necessary details and they can login using phone number and password created during the time of account creation. They can select the items to buy and also the nearby shop from which they need the items. The payment can be done.

Vendors

Vendor creates account by giving the necessary details and then they can login using the username and password created during the time of account creation. They can add their shop details including account details for payment. They should also update the stock details on a regular basis. They should also package the requested items by the customer and handover to the delivery boy.

Delivery Boy

Delivery boy creates account by giving the necessary details and then they can login using the username and password created during the time of account creation. If a request for delivery is notified, they can accept or reject it. If they accept it then they will get the details of the shop from which delivery is to be taken and also the address for delivery.
